**TARGET SHIP DATE:**
Team Sizzled (Danny, Princeden, Ziyad, Sascha)

Wiki Components
- A view template
  - Should be able to be rendered into any wiki page
  - The user must be able to edit this page / linked to edit template somehow
- An edit template
  - Echo the view page
  - Only edit text
  - Have markup
- A database
  - Store wiki information
    - Store pages their content
  - Maybe create linked tables for sub categories of a wiki (etc, a main wiki table links to a table for all the food pages, a table for all the drink pages, etc) - more of an addon than necessaryfeature
- A home template
  - Should render with links to all the wiki entries
- App.py
  - When run the wiki should work in its entirety and display a home page
    - Means you can navigates pages, as well as create and edit pages
    - Uses flask and information from the database to render pages
    - Can utilize functions / the python package to update and edit the data base
    - Must be able to always return to the home page
- Create a package for managing/editing the web pages
  - This package should contain python files that can process information to update the database accordingly
    - add/delete wiki entries, edit currently existing ones

Component Map

Site Map

Homepage → wiki entry 1, wiki entry 2, wiki entry 3, ... wiki entry n

Assignments
- Danny
